LibertyLance is a self regulatory decentralized gig based marketplace for freelancers and clients built on the Ethereum blockchain. Our platform gives freelancers the opportunity to showcase their gigs for a particular fixed price and will give clients the opportunity to select from various gigs based on the ratings, price and delivery. Smart contracts will be used to ensure smooth transaction and act as an escrow medium between the two parties without involving any middleman.

LibertyLance aims to transform the gig economy by providing a self regulatory trustless system between the freelancer and the client. It intends to solve many underlining problems currently faced by the freelancing community such as:

**Co- Founder/ Head of Community Manager**

**Location Wroclaw, Lower Silesian District, Poland**

#### Abstract

RocketICO is the world's first decentralized accelerator based on the DAO concept. This document describes the operating principles of the Platform. RocketICO is an environment where startups interact with experts and investors in an efficient and safe way in order to create projects, setup ICO initiatives and raise funds in cryptocurrency. RocketICO Platform is a decentralized web-application (dApp) built on the Solidity DAO framework.

We describe the stages that any project needs to go through when setting up an ICO initiative at the Platform, as well as the tools for startup teams, investors and experts designed to ensure their efficient interaction within the Platform. We also define the RocketICO token

model and explain the reasons behind its cost increase.

We want to thank all the members of the crypto community and all those who contributed to the birth of a new digital economy. We hope our platform will become the start point for dozens of great ideas that will find their place in the new world.

Thank you!

**Employment Duration 7 mos**

**Location Dubai, United Arab Emirates**

Nowadays, a growing part of funds' transactions and services is achieved through a peer to peer (P2P) Cash system known as Bitcoin; an open source crypto-currency developed by Satoshi Nakamoto team in 2008 and launched in 2009. The system relies on public-key cryptography and blockchain technology, granting an unprecedented level of anonymity. Exploiting this technology to a further extent, comes Districts, a 3D virtual reality platform promoting the crypto-currency to people with no computer science expertise, allowing them to build or use decentralized applications in a living world, for a better presentation and management of their services, businesses, without writing or compiling code. In parallel, and based on the Bitcoin and Dash source code, with a characterized blockchain that enables many functions in Districts, we present to you 3DCoin, our new crypto-currency
