## MISSION STATEMENT

The latest movement in my career is a shift from business and sales software development to the world of blockchain technology. After the rapid adoption of this beast of a technology we call "blockchain" the last year I made a decision after heavy analysis to focus my attention on working to become a development and business cryptocurrency subject matter expert- I installed solidity among other tools and began this journey onward to understand the uncharted frontier of blockchain and cryptocurrency in business.

## EXPERIENCE

**Crypto Coin Ninjas, Washington D.C. | [www.CryptoCoinNinjas.com](http://www.CryptoCoinNinjas.com)**

### **Software Engineer, Business Analyst, & Consultant**

2017 - PRESENT

I provide an array of our customer or client's industry specific professional services and expertise relating to the world of cryptocurrency and technical implementation of the "blockchain" across all industries and facets of business around the globe. As a Software solutions and Consulting Firm we take pride in using the latest cutting edge protocols and SDK/API's to serve small to corporate size business entities as well as the individual investment based clients.

Nonstop 24/7 our auto trading bots are crushing algorithms enabling tools for the Ninja's to identify various streams of a particular sector's function and how to monetize accordingly in contrast to the current market context when cross referencing alt coins with Bitcoin and hundreds of international exchanges. This body of work will identify trends, automate trading and financial transactions with predefined logic that derives from our real-time "Ninja cooked" data model therefore allowing our firm and it's software to protect assets from the ever happening volatile swings in crypto as we are speeding on a boat through uncharted waters in this groundbreaking new financial tranche.

Aside from the data model and direct consultation we have delivered a variety of solutions from Crypto payment portals, API or integration services, Import/Export apps for flat files into various vendor and home cooked systems furthermore the ability to deliver full stack data driven enterprise solutions.

## **Private Consultant, Ft. Lauderdale FL USA | Washington D.C. USA**

### **Lead Developer & Business Analyst**

2017 - 2018

Lead Developer Consultant hired to help a company in the Aviation MRO industry. Provided full stack custom enterprise software development, support post go live, and implementation while delivering solutions in the form of fully scale-able enterprise software, custom web application development, process streamlining-expedition, plus expert data conversion and 3rd party vendor integration efforts. The software or services I developed used the .Net framework with a variety of the web and application programming specifications and languages such as C#, ASP.Net, HTML 5, Apex, Javascript, SQL/Sql Server, and various other technical resources or libraries.
