

Sash Jeetun C.V. Cryptocurrency Expert – London, UK

Co-Founder of Crypto-X venture capital fund at Bluefin Berkeley

BLUEFIN BERKELEY

UCFB

London, United Kingdom

I grew up on a island in the Indian Ocean where I had a upbringing of not wasting time on materialistic things so I had early preparation for the market and life, by the age of 21 I had already amassed 7 placements where I spent 2.5 years learning about different sector, demands in developing countries, FMCG, Supply chain, Markets, Negotiations, Public speaking, working for a Top 100 firm listed in MSE and contractor of a Strong FTSE100 firm I learnt a lot more than just your common graduate.

Growing up in a well established family where life experiences meant more opportunities than having a first class degree, my father being a public speaker and president of charitable organisations throughout from young age not just inspired me but pushed me to thrive and excel in works I do.

For me experiences counts more than qualifications, university only prepares you for work, what they cannot prepare you is the Level of experiences and I feel I am very experienced person, I went to a public school and then I was private schooled where I felt learning was more interesting in class led where I had direct interaction 1-1 on a daily basis and learnt from the very best like my economics teacher later becoming a Economics Advisor to the state and MP currently, my accounting teacher was retired accounting book author and my English teacher was himself a retired director of another institution, my second English teacher became a State Ambassador envoy in Middle East.

All these makes me not afraid to take bigger challenges ready to learn a lot more, My main motivations in life is not necessary money or latest gadget its more quality of work, with an entrepreneurial mind, I am very creative always looking for opportunities to improve my impact in society.

Special interest; Ai, R in ophthalmology, Fine Arts, Gastronomy, Data Analytics, Trading as a hobby, H-funds and markets, Emerging markets, Macro Economics, Geopolitical, Globalisation and Cryptocurrency.

Co-Founder of Crypto-X fund Bluefin Berkeley

Company Name BLUEFIN BERKELEY

Dates Employed Jun 2014 – Present

Employment Duration 3 yrs 11 mos

Location London, United Kingdom

Currently in phase 1, this investment crypto-x fund is based on cryptocurrencies, where investments are diversified into different cryptos and carefully selected ICOs.

As you know of Bitcoin's recent progress yet it has big investors/institutions hesitating because of its volatility, so by using a team of experts in the city of London to work alongside us we have been testing out algorithms over the last 3 years where we can invest safely by reducing the high volatility risks but also a good return over a certain period of time. With successful back testing results in the last 3 years bringing in greater return than your regular product, We are regulated Luxembourg only focussed on institutional and qualified investors.

Ophthalmic Research & Psycophysics

Company Name Moorfields Eye Hospital, London

Dates Employed Jun 2016 – Present

Employment Duration 1 yr 11 mos

Location NIHR Clinical Research & Development facility, Moorfields Eye Hospital, London

Working in different ground breaking ophthalmic research at Moorfields in clinical research and development I'm responsible in making sure correct data is collected accurately in accordance to different protocols, I am working in trials both sponsored and NHS based.

I'm expected to be compliant with my GCP, I'm currently involved in more than 55 trials, I have excellent knowledge of state of art equipment and devices such as Spectralis, Topcon, Optivue, Compass, HRT, Femto, Pentacam, radial length scan, wavelength scans, Octopus 900, Microperimetry, Cell check Konan, Humphreys visual fields, Triton, Maia, biometry and many more.

Over my time at Moorfields I have developed clinical skills working in glaucoma, cataract, cornea, external disease, medical retina, injection clinics and have working experience working on Moorfields private with lasik patients referrals.

Accurately perform complex clinical and non-clinical task to a high standard based on the trial protocol, manuals and SOP's.

Responsible to provide technical diagnostic tests, working with raw data from analysis and ensuring assessments based on study specific protocols are done with patients attending different Study trials in the NIHR Clinical Research Facility.

A few of the major trials I worked on are Clarity, Regenerate, IRIS 2, Fact, Light, Inn-focus and Gene Therapy studies like CNGB3 and OPTIRPE65 study.

Femto OT

Company Name Moorfields Eye Hospital, London

Dates Employed Jul 2014 – May 2016

Employment Duration 1 yr 11 mos

Location various

Working in one of the huge trial called the FACT Trial at Moorfields NHS trust, a major research to see the advantage of using laser technology femto rather than manual capsulotomy and fragmentation, this trial is a first in the NHS in collaboration with the NIHR, I was the lead technician for this trial, I am also among the first in the NHS to receive a full training on this laser.

The trial, which has been funded by the National Institute for Health Research (NIHR), will assess whether this type of laser assisted cataract surgery leads to improved vision and quality of life for people undergoing cataract surgery.

Part of my role here I had to work with precision in “microns” where different settings would be used to create personalised treatments according to biometric measurements and I was also working with statistics as I was in charge of managing stocks and making sure equipment are running according to calibration and with high level of precision, analysis of data on a daily basis, while making sure patient experience remained at high level, at same time working with back office tasks such as dealing with external laser companies to make sure all latest issues were addressed and worked on.

So what’s FACT trial?

It is a multi-centre trial which will enrol more than 800 people, is currently taking place at Moorfields Eye Unit at St Ann’s Hospital in north London with a second centre at Wolverhampton Infirmary beginning at a later date. Patients will be randomly assigned to one of two treatments –half will undergo surgery with some of the steps performed using the femtosecond laser and half will have standard cataract surgery. Patients will be followed for a year after surgery and the study will last for almost four years.
